ACRYPOL + CHOSEN BY MANCHESTER CITY COUNCIL

With the building's original mastic asphalt roof beginning to fail, the residents at Armitage Court in West Gorton, Manchester needed a fast and dependable refurbishment solution. Manchester City Council chose Acrypol +, the only product that could meet the local authority's Best Value Performance criteria and which could be applied quickly to a large area with many roof "details" such as ventilation outlets and up-stands.

Manufactured by solutions specialists, Acrypol Products, Acrypol + is increasingly being specified by local authorities and housing associations because of its exceptional performance, value for money and fast application properties.

Acrypol +, which is brush applied, offers the most effective method of working around difficult areas on the roof surface. The product is also cold applied – which means heavy, dangerous bitumen boilers and heating equipment are not required at roof level.

Manchester City Council asked for Acrypol's additional scrim layer to be incorporated into the specification. This improves the solution's performance and durability even further and "toughens" the roof surface in the event that it may occasionally be foot trafficked.

Featuring a highly advanced "one-coat" chemical structure, Acrypol + gives immediate, tough, durable waterproof protection, stopping leaks and encapsulating the entire roof.

Any trapped moisture in the roof's substrate is allowed to evaporate harmlessly into the atmosphere and even the threat of damp, unpredictable weather will not stop the product's unique compound from bonding immediately.

Acrypol + is available in Medium Grey or Solar White from leading builders' merchants and specialist roofing merchants nationwide. Always ask for Acrypol + by name. Don't accept anything else.
