## ACRYPOL + SUPERB COST EFFECTIVE ROOF WATERPROOFING

Acrypol + has always offered the very best in cost effective, attractive, reliable roof waterproofing for all types of industrial, commercial, Local Authority and Housing Association projects. It is now proving to be the ideal choice for historic, religious or heritage roof refurbishments too.

Failing felt, asphalt, lead, copper, concrete or asbestos roofs are being re-waterproofed to look and perform like new for a fraction of the cost of total replacement – a major bonus for cash strapped charities and heritage groups.

Acrypol +, from solutions specialists Acrypol Products, was recently specified by Manchester based architects Hulme Upwright Manning, for St Peters Roman Catholic Parish Centre near Stockport, where the Acrypol + roof system was installed.

Now guaranteed for 10 years, the original mastic asphalt roof was failing and immediate action was required to protect the building's interior and visiting parishioners. Cleaning and preparation of the 500 SqM roof was followed by a sealer layer and two layers of Acrypol + Solar White, reinforced throughout with Acrypol scrim sandwiched between layers.

Acrypol + has a long term track record of success, tried and trusted for two decades throughout the UK and is now recognised as offering the best in fast cost effective flat roof waterproofing. It also benefits from an easy **heat free** method of application.

Acrypol + incorporates an exclusive chemical compound that is often imitated but never equalled. Acrypol + is an acrylic resin, dispersed in a solvent form to a semi liquid paste. The coating film dries to a tough durable yet "elastic" overlay.

For increased density and to ensure Acrypol + will even fill gaps and cracks up to 10mm wide, the compound incorporates "fibres" which literally act as a scrim, filling and bridging any weak areas. Trapped water in the substrate will naturally evaporate due to the product's chemical structure and Acrypol + can be applied during almost any weather condition making it extremely versatile and user friendly.

Acrypol + is available in 4 x 5kg tins or 20kg drums, in Solar White or Medium Grey, from selected roofing and builders merchants across the UK.
