

ASDA TRUST METAL-KOTE FOR SUPERB PROTECTION

Retail giant, ASDA has chosen Metal-Kote to protect and extend the life of its massive 4000 sqm profiled metal roof system at its South Woodham Ferrers store in Essex.

Metal-Kote is a highly advanced refurbishment solution designed to refurbish and improve the aesthetic appeal of profiled sheet metal roofing and cladding. Manufactured by Acrypol Products, a company with a well respected reputation for quality and innovation in the roofing industry, Metal-Kote is increasingly being chosen by specifiers and building owners needing a cost-effective way to dramatically extend the life of an existing metal roof for a fraction of the cost of total replacement.

Specified for the ASDA store in South Woodham Ferrers by London based contractor, Roof-link Industrial & Commercial Ltd (Tel 01992 656960), Metal-Kote was spray applied to the building's roof areas as part of a refurbishment contract which revived the original profiled metal roof, making it look and perform as new – for a fraction of the cost. Although black was chosen for this contract, Metal-Kote is available in a wide range of standard colours and any RAL colour – subject to order.

Requiring just one coat, Metal-Kote achieves extremely fast coverage and can be either brush or spray applied. It meant that the ASDA store could safely remain open to customers throughout the operation. The product offers further financial savings in labour costs when compared with total replacement. There is also no need to remove failed materials, which can be costly and logistically awkward.

The product's exclusive chemical formula offers levels of protection that can't be matched by other manufacturers, and a choice of two quantity options (2.5L or 20L) makes Metal-Kote exceptionally user-friendly for projects of all sizes.

No other metal protection solution is as fast acting or easy to use. Metal-Kote's highly advanced chemical compound means it immediately bonds to form a waterproof barrier in just two hours. Metal-Kote combines total 100% waterproofing, outstanding adhesion, and flexibility.

Metal-Kote is completely compatible with plastic coated metal sheeting and will instantly give warehouses, commercial, industrial and public sector buildings, garages, agricultural buildings, mobile homes and caravans a new lease of life.
