

BNFL SPECIFY ACRYPOL PRODUCT'S SYSTEM 15

BNFL Plc, the holding company for British Nuclear Group, Westinghouse and Nexia Solutions, has specified System 15 from Acrypol Products – the ultimate in roof waterproofing solution systems, ***guaranteed*** for 15 years.

System 15, which has been installed to waterproof roof areas at one of the organisations UK facilities, is said to be the most advanced solution based “built up” system available. Roof repair work at the site

had to be carried out quickly without any disruption to day-to-day activities, a major consideration for commercial and industrial Facility Managers, who are increasingly turning to cold applied products.

Acrypol Products launched System 15 as an extension to its highly successful portfolio of waterproofing solutions for the construction industry. System 15, which carries a 15-year performance guarantee, is now being regularly specified by Local Authority and Public Sector specifiers who are keen to combine the convenience and safety of a cold applied solution product with guaranteed long-term waterproofing integrity.

Especially developed for the fast, cost effective refurbishment of commercial, industrial and public sector roofing, Acrypol's System 15 heralds a new generation of products in the waterproofing solutions business.

System 15 can be installed in a fraction of the time it would usually take to fix other types of waterproof membrane. Because the System is seamless, vulnerable areas such as upstands and vent outlets receive the same high level of waterproofing as the rest of the roof.

In addition the system is cold applied – which means no more crippling insurance premiums, site regulations restricting naked flame, boilers and hot bitumen on site. With Contractors; Local Authorities and Housing Associations increasingly turning to such cold applied methods of installation this fast, reliable heat free system will add even more project success stories to Acrypol's portfolio.
