

Metal-Kote stops Everton FC getting the roofing blues

Thanks to Acrypol's premier league Metal-Kote protection, the roof of Goodison Park's main spectator stand will be watertight whatever the season for at least another decade.

Everton FC is planning to move to a new ground in the next few years but, in the meantime, needed an affordable way to keep the rain off its devoted fans.

Specified by Structural Engineers Mott MacDonald, Metal-Kote offered the most cost effective and reliable way to reseal the stand's aging, leaky roof. This meant the Toffees would not have to chew over ways to fund a complete replacement.

Acrypol supplied more than 2,000 square metres of the acclaimed coating in dove grey to applicator Vale Decorators Liverpool Ltd this summer.

Peter Kevan, Deputy Managing Director of Acrypol said: "With Metal-Kote, Everton found an economical yet ultra durable way to give its main stand a second lease of life.

“It looks like new from the pitch and is certainly a winner with fans, who no longer have to worry about the unpredictable Merseyside weather spoiling their match.”

Acrypol Metal-Kote can be applied in a single coat to combat flaking, rusting and peeling metal and plastic coated roofs. With no priming necessary, the exclusive formula offers 100% waterproofing and outstanding adhesion.

Alan Bowen, Everton FC’s Stadium Manager, commented: “The club scored a winner with Metal-Kote. It looks fantastic, offers excellent protection from the elements for our fans and was easily the most competitive product around.”

Metal-Kote can be manufactured in any RAL colour.
