

## QUARTZDEK TRANSFORMS AT BUSH FAIR

Potentially hazardous steps to one of Harlow's biggest shopping centres, Bush Fair, have now received an ultra high-tec slip resistant and waterproofing surface so that thousands of regular visitors can enter and exit safely.

**Quartzdek**, exclusively from solutions specialists, Acrypol Products combines real quartz granules and a super-tough waterproof resin in one product. It is regularly specified by public sector specifiers for walkways, balconies, stairs and risers where a safe pedestrian surface is required - but that is only half the story.

Quartzdek will **also** dramatically improve the aesthetic appeal of such areas so they continue to look as good and perform effectively for years. Where once they may have looked dull and unattractive.

Quartzdek, exclusively from Acrypol, ensures improved performance is matched by improved looks too.

Quartzdek means there's now an easy way to combine high performance waterproofing with the safety of a slip resistant surface. It is fast to install and perfect for the refurbishment of balconies, walkways, exterior stairs, risers and roof gardens.

The secret behind Quartzdek is **real quartz granules** which are applied over an incredibly tough, flexible polyurethane waterproof resin, all sealed and bonded together with a final layer of resin.

Quartzdek can be used over concrete, cement, asphalt and even quarry ceramic tiles.

A choice of three aesthetic colour mixes means pedestrianised walkways can be transformed, brightened and can again look like new.

Acrypol has a proven track record of developing some of the most advanced waterproofing solutions – each one created to give superb performance, manufactured from high quality materials that few can match.
