

ACRYPOL+ PERFORMS AT RAF ST ATHAN

Royal Air Force St Athan, in the Vale of Glamorgan, is home to a number of MoD organisations. Specifiers, responsible for essential roof repairs on the site, demanded absolute proven waterproofing integrity – but also needed to achieve best value and fast, immediate protection; Acrypol +, from solutions specialist Acrypol Products, was the answer.

The St Athan base carries out maintenance and modifications on military aircraft and trains technicians in maintenance and repair of ground support equipment, roles that are vital in the UK's defence structure. Property/Works Services site management is delegated by the RAF to Atkins Defence Asset Management who oversee the site's busy day-to-day building maintenance requirements.

When the original bituminous roof above the Officers' Mess and Sergeants' Mess showed signs of failure, action had to be taken immediately to stop any risk of water leaking into the buildings. Acrypol + has a long and respected history of being chosen by Local Authority and Public Sectors specifiers. It allows extremely fast application, with immediate waterproofing protection, even in damp or unpredictable weather.

Acrypol + is the ultimate in cold applied roofing materials. Repair work can be carried out in absolute safety, without the use of hot bitumen on site, and without the expensive and time consuming disruption associated with the removal of old, failed roof materials.

Acrypol + features a highly advanced "one-coat" chemical structure. It gives immediate, tough, durable waterproof protection, stopping leaks and encapsulating the entire roof.

Any trapped moisture in the roof's substrate is allowed to evaporate harmlessly into the atmosphere and even the threat of damp weather will not stop the product's unique compound from bonding immediately.

Acrypol + is available in Medium Grey or Solar White from leading builder's merchants and specialist roofing merchants nationwide. Always ask for Acrypol + by name. Always insist on the professional's choice.
