

SAFER WALKWAYS FOR REDDITCH RESIDENTS

Hundreds of Redditch Borough Council residents, including many children, elderly and disabled, will have greater protection against accidents on slippery public walkways thanks to Quartzdek, an ingenious slip resistant and waterproofing solution from Acrypol Products.

The Winyates Centre and the Woodrow Centre, both Redditch Borough Council housing stock, required urgent maintenance to four major heavily foot trafficked areas to improve residents' safety and to give better aesthetic appeal.

In addition, many of the developments' public areas suffered regular "ponding" as a result of heavy rainfall. The council demanded high performance slip resistance **and** waterproofing qualities in one product – saving time and money when compared to the installation of two separate materials.

Quartzdek was the ultimate solution, and over 1000 sqm was installed in two phases, to a large number of stair wells and a massive network of public walkways regularly used by the residents at the Winyates and Woodrow Centres.

Quartzdek, exclusively from solutions specialists Acrypol Products, combines real quartz granules and a super-tough waterproof resin in one product. It is regularly specified by public sector specifiers for walkways, balconies, stairs and risers where a safe pedestrian surface is required - but that is only half the story.

Quartzdek will **also** dramatically improve the aesthetic appeal of such areas so they continue to look good and perform effectively for years, where once they may have looked dull and unattractive.

Quartzdek ensures improved performance is matched by improved looks too.

Quartzdek means there's now an easy way to combine high performance waterproofing with the safety of a slip resistant surface. It is fast to install and perfect for the refurbishment of balconies, walkways, exterior stairs, risers and roof gardens.

The secret behind Quartzdek is **real quartz granules** which are applied over an incredibly tough, flexible polyurethane waterproof resin, all sealed and bonded together with a final layer of resin.

Quartzdek can be used over concrete, cement, asphalt and even quarry ceramic tiles.

A choice of three aesthetic colour mixes means pedestrianised walkways can be transformed, brightened and can again look like new.

Acrypol has a proven track record of developing some of the most advanced waterproofing solutions – each one created to give superb performance, manufactured from high quality materials that few can match.
