TRADITIONAL COPPER ROOFS CAN LOOK LIKE NEW WITH METAL-KOTE

A revolutionary single application waterproofing and protection solution from Acrypol means the attractive traditional copper roof at Blackwood Comprehensive School in Caerphilly will look and perform again as if it were brand new.

The introduction of Metal-Kote by Acrypol, the UK's most knowledgeable manufacturer of quality solutions for the construction industry comes as a major breakthrough in the protection and re-waterproofing of profiled sheet metal – even if it is plastic coated. It means there's now a really cost effective way to renovate dull unattractive profiled metal and copper roofing whilst upgrading the waterproofing integrity and guaranteeing longer life.

Caerphilly Council demanded a product with superb waterproofing performance and the ability to recreate the look of the original copper roof. Metal-Kote was the only product on the market to fit the bill.

The contract, which was carried out during the school holidays and was therefore up against a tight deadline, involved the brush removal of loose debris from the roof. It was then high pressure cleaned and small tears in the copper were repaired. The entire roof area was then coated with Metal-Kote in copper green, the only product of its kind to work immediately in a single application.

The roof, previously dull and showing signs of failure, now looks and performs like new with the refurbished areas blending in perfectly with existing roof areas.

Metal-Kote, has gained a remarkable following of architects, specifiers and Local Authorities all looking for a cost effective way to treat and protect metal roofs buildings.

Perfect for Plastisol sheeting, warehouses, commercial and industrial buildings, garages, agricultural buildings, mobile homes and caravans, Metal-Kote combines total 100% waterproofing, outstanding adhesion, flexibility and UV protection all in one product.
