

## WHEN SAFETY'S AN ISSUE ACRYPOL + IS A PROVEN WINNER

Acrypol Products, say that a dramatic reduction in the use of naked flames at roof level has meant an increase in demand for their highly successful Acrypol + waterproofing solution that waterproofs and bonds immediately without the need for heat guns, bitumen, torches or adhesives.

Schools, Housing Associations and Local Authorities across the Country are now more concerned than ever about roof refurbishment work being carried out with as little disruption or risk to those using the building and Acrypol + has continued to prove itself a winner on such fronts.

Contractors using Acrypol + can also make potential savings by reduced insurance premiums as well as increasing the opportunities to win more business as building owners and specifiers become even more conscious about roof level safety issues in the future.

Acrypol + features a highly advanced “one-coat” chemical structure. It gives immediate, tough, durable waterproof protection, stopping leaks and encapsulating the entire roof. Acrypol + is brush applied directly over the prepared existing roof surface therefore alleviating the expensive and time consuming disruption associated with the removal of old, failed materials.

Any trapped moisture in the roofs substrate is allowed to evaporate harmlessly into the atmosphere and even the threat of damp, unpredictable weather will not stop the product's unique compound from bonding immediately.

Acrypol + has remained a firm market leader and contractor favourite for nearly two decades. Its quality formula has often been imitated by other competitors, however Acrypol +'s chemical compound remains a source of industry intrigue. Managing Director Jim Higgins claims "We put quality in the tin – there can't be any short cuts, it's as simple as that!"

Acrypol + is available in Medium Grey or Solar White from leading builder's merchants and specialist roofing merchants nationwide. Always ask for Acrypol + by name. Insist on the "original" professional's choice.
