FAST, SAFE REFURBISHMENT OF CEMENT BOUND ASBESTOS ROOFS

Failed corrugated cement bound asbestos roofs can easily be up-graded, re-waterproofed and given a new lease of life using Acrypol + from leading solutions company Acrypol Products.

The refurbishment of the cement bound asbestos roof above the Valley Nursery School demanded product excellence and contractor tenacity, so client, Walsall Metropolitan Borough Council called in the experts, Acrypol Products.

The roof at the school was originally installed some thirty years ago when the single storey pre-cast sectional building was constructed to form part of the local church hall.

Walsall MBC demanded a product that would give instant high performance waterproofing protection and could be installed in an environment calling for great attention to detail, adopting an intelligent, trustworthy, professional approach.

Specialist asbestos contractor Restorex was involved in the first instance, preparing, surveying and monitoring the roof, its fibres and any microscopic traces of asbestos waste. It was imperative for the building to have a clean bill of health inside and out.

Once the initial preparation process was completed, Acrypol's Acrypol + roof waterproofing solution in Solar White was applied, effectively encapsulating the roof surface, making it free from leaks, cracks and surface damage.

Acrypol + is an advanced Acrylic Polymer coating. It can be used to overlay almost any failed flat roof and because it bonds immediately it is ideal for locations where performance has to be combined with minimum occupier disruption and fast application.

Acrypol + features a formula so remarkable it literally allows the roof to breathe. Any trapped moisture in the substrate will harmlessly evaporate.

The project at the Valley Nursery took just eight days to complete and formed part of a total refurbishment project for the school set to improve interior, exterior and structural standards.

Launched 21 years ago, Acrypol + continues to be the market leader for roof waterproofing solutions. Many competitors have tried to imitate the company's branding, all falling a long way short of the stringent production standards set by Acrypol Products. Always ask for Acrypol + by name because nothing else comes close.
