

Project Profile

McDonalds

The McDonald's restaurant chain, with a reputation for demanding excellence from its supplier partners, has chosen Acrypol +, the UK's **most** advanced waterproofing solution for the roof refurbishment at two of its branches. The product is also being considered at other sites around the country.

The pre-trial approval for manufacturer Acrypol Products to commence initial installation at a selected location involved rigorous Health & Safety training, in line with McDonald's requirements. Only manufacturers and contractors who fully comply with a stringent safety policy are permitted to work on any of the company's sites.

Acrypol has a long-term track record of success. It remains tried and trusted in excess of two decades and with rocketing insurance premiums and site restrictions banning heat at roof level, Acrypol + is increasingly specified for offering high performance waterproofing properties and a fast, heat free method of application.

It incorporates the very best chemical compound, manufactured exclusively by Acrypol – it is often imitated but never equalled. Acrypol + is an acrylic resin, dispersed in a solvent form to a semi liquid paste, the coating film dries to a tough durable yet "elastic" overlay.

Client: McDonalds

Project: McDonalds

System: Acrypol +
